DETAILED ACTION

The indicated allowability of claims 2, 4, and 5 if incorporated into claim 1 is withdrawn in view of the newly discovered reference(s) to Bressler. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5 recites the limitation "the liquid delivery mechanism" in 2. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-5, and 7 are rejected under 35 U.S.C. 102(e) as being rejected by Bressler.

The Bressler reference discloses a dispensing applicator (Figure 5) comprising a handle with a closeable end 12 (hole in end 12 is closeable via a user's finger), a base 13, and a reservoir 22, a head with a housing 18 and an applicator portion 33, a pivoting connection 19, and a pump 24. Regarding claim 3, the reservoir is in liquid communication with the head. Regarding claim 4, the applicator further comprises a locking mechanism (the pivoting of the base with respect to the housing, see Figure 6). Regarding claim 5, the applicator includes spring 30 which biases the applicator as claimed. Regarding claim 7, the pump includes piston 27.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
